OMEGA CHEMICAL SUPERFUND SITE OPERABLE UNIT 2 (OU-2) FEASIBILITY STUDY, JANUARY 2010

Dear Ms. Deschambault:

The Department of Toxic Substances Control (DTSC) has reviewed the Omega Feasibility Study (FS) for OU-2 dated January 2010. The selected interim containment remedy addresses contaminated groundwater at OU2 downgradient of the former Omega Chemical, Inc. property. The proposed treatment technologies include groundwater extraction processes of advanced oxidation, biological and conventional liquid phase granular activated carbon (LGAC), nanofiltration and disinfection, monitoring and institutional controls. DTSC concurs with this approach.

Should you have any questions please contact Ms. Lori Parnass, Project Manager, at (818) 717-6546.

Sincerely,

Project Manager
